The glove material has to be impermeable and resistant to the product / the substance / the preparation.

Due to lack of tests no recommendation to the glove material of any type can be made for the product / the preparation / the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.

- **Glove material**

The selection of the suitable gloves does not only depend on the material but also on other quality characteristics which vary from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

- **Breakthrough time of glove material**

The exact breakthrough time has to be found out by the manufacturer of the gloves and has to be observed.
